

# ChatSiGira

---

## Iteration Plan 1

---

2/11/2019 – 20/12/2019

## Objectives

---

The purpose of this iteration is to ensure the functionality of a local chat through the use of a central server. This includes all the handling of connection requests to the server to access the global room and start messaging. At the end of this iteration, users should be able to:

- Use the graphical interface to log in and send a request to the server.

At the end of this iteration, the system should be able to:

- Accept the request and let us access the public room and then the private room to start a conversation.

## Use Cases

---

The following use cases are involved in this iteration:

- Use case 1: user access - Will be implemented to access the public room through user login.
- Use case 2: general room - The interface will be implemented and then the functions to be able to text
- Use case 3: chat interface - Will be implemented for messaging with a single client.
